DETAILED ACTION

This Application has been examined. The claims 1-29 are pending. The examination results are as following.

Examiner's Amendment

1. Authorization for this Examiner's Amendment was given in a telephone interview with Mr. Mark D. Saralino on 7/2/2005.

NEW ABSTRACT

A frame rate controller (20) is provided for controlling the frame refresh rate of an active matrix display. The controller (20) comprises a first circuit such as a preloadable synchronous counter (21) which counts vertical synchronization signals VSYNC and supplies an enable signal FE for every Nth frame of data, where N is an integer greater than zero and is selectable. A gating arrangement (26) is controlled by the enable signal FE so that an active matrix display is refreshed for every Nth frame of data, thus allowing a reduction in power consumption of the display.

Reasons For Allowance

2. The following is an examiner's statement of reasons for allowance: The present invention is directed to a controller for controlling the frame refresh rate of an active matrix display,

Art Unit: 2677

characterized by comprising a first circuit responsive to display signals from a display controller for supplying an enable signal for each Nth frame. The closest prior art, Eglit (US 6,054,980) shows a similar system, however he fails to teach or suggest a second circuit for enabling refreshing of the display by each Nth frame supplied to the display controller in response to the enable signal for preventing refreshing of the display by each other frame supplied to the display controller in the absence of the enable signal as claim 1.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
